## Metal clad box with double switch for Creative-Tube

### Product short description:

Creative-Tubes is Creative-Cables system of fabric-covered, extremely flexible and colourful conduits, perfect for creating unique visible electrical installations.

This metal clad box with two switches can be connected to 20mm Creative-Tubes. Connecting Creative-Tube to the junction box is simple and can be done through the use of the (separately sold) metal terminal with M20 thread to connect each component to the Creative-Tube.

Thanks to the presence of the double switch you can use this junction box, both as a decorative element and as a doubly functional element, increasing the flexibility of your electrical system, which will thus become fully customizable to your needs, even those that change over time!

### Product description:
